

**IN THE SPECIFICATION:**

Please delete the following paragraph at Page 13 before line 22:

~~The present invention also comprises a rotor system calibration arrangement comprising a rotor system described hereinbefore whereby the control means includes means to periodically set a reference datum for the desired value of the gap and means to operate an open loop control strategy dependent upon responses from the means to detect rub contact. The means to periodically set a reference datum would be a program running within the control means, which would be either a separate computing device or part of a sub-system in the Engine Control Unit (ECU) 27.~~
